MONTHLY WEATHER MAP

September 1961

LIBRARY
NOV 29 1961

General Summary of Weather Conditions

September 1961 was one of the warmest Septembers on record throughout eastern Canada. In the western provinces, on the other hand, it was unusually cool, particularly in Alberta and Saskatchewan where September mean temperatures ranged to six degrees below normal. Precipitation was light over most of Alberta and Saskatchewan, the Maritime Provinces and Newfoundland. Heavy rainfall from the remnants of hurricane Carla fell in central Ontario while in western New Brunswick, hurricane Esther brought heavy rains. Earlier in the month hurricane Betsy had skirted the Grand Banks of Newfoundland without affecting the weather in any of the Atlantic Provinces. About mid month the extra tropical phase of Carla moved northeastward over the upper Great Lakes area of Ontario and thence into Quebec. Later in the month the remnants of Esther moved up through the Maritime Provinces.

The upper air circulation during the first three weeks of September was characterized by a stronger than usual westerly flow over western Canada while the reverse was true in eastern Canada. This circulation made conditions unfavourable for marked outbreaks of unseasonably cold arctic air. During the third week of the month, the flow over North America became more meridional, a deep trough developing over Manitoba and a pronounced ridge over the Maritime Provinces. During the latter part of the month, northern cold air masses moved southward across the Prairies while warm air continued to surge northward over the Great Lakes area and into the Atlantic Provinces.

In marked contrast to conditions during the summer months of 1961, temperatures ranged from two to five degrees below normal throughout British Columbia during September 1961, with the greatest anomalies being in the central interior. For many stations it was the coldest September in the past two decades while at Prince George it was the coldest September in a record extending over the past fifty years.

September precipitation was below normal on Vancouver Island and the Fraser delta, with deficiencies ranging to sixty per cent, averaging forty per cent. In the Kootenay and Okanagan valleys there were deficiencies of forty to eighty per cent. Over the remainder of British Columbia the pattern was irregular but most stations experienced precipitation excesses which ranged to about sixty per cent in the central part of the province. At Quesnel there were reports of two to three times the normal fall while in the British Columbia portion of the Peace River valley, Fort St. John reported a thirty-eight per cent deficiency. The greatest precipitation total for September 1961 was reported from Ocean Falls, which had 17.10 inches, almost forty per cent above normal.

In the Prairie Provinces, temperatures dropped below normal on the first day of the month following one of the hottest Augusts on record. Light frost occurred in eastern Alberta and central Saskatchewan on the 3rd with a few points setting new record low temperatures for the date. Temperatures continued to drop until the 13th. From the 13th to the 17th temperatures rose briefly above normal but after this the balance of the month was cool with daytime temperatures as much as twenty degrees below normal on occasions. New record low temperatures were set on September 30th in central Alberta and northern Saskatchewan. Mean temperatures for the month were four to seven degrees below normal in Saskatchewan and the southern part of Alberta and three or four degrees below normal elsewhere in the Prairie Provinces.

The summer drought continued in southeastern Alberta and southwestern Saskatchewan, deficiencies ranging to ninety per cent. In the grain areas of Manitoba and southeastern Saskatchewan, precipitation was above normal with a number of stations in the Portage la Prairie - Brandon - Boissevain area experiencing two or three times the normal fall. Precipitation was also heavy in the southwestern corner of Alberta. In the Peace River district the distribution was irregular but averaged near normal for the district as a whole. Considering the six months from April 1st to September 30th, only 4.88 inches of rain were reported for Regina. The only other comparably dry summers on record at Regina were 1894 with 3.88 and 1937 with 5.58 inches.

In the province of Ontario, September 1961 was one of the warmest on record. New record highs were established for mean temperature at a number of places including Ottawa, Hamilton and London. At Toronto, the mean of 67.6 was the highest September mean since 1881 when 67.9 was reported. On the 2nd the maximum temperature of 92 reported at Caledonia was the highest anywhere in Canada during the month. Mean temperatures for the month averaged four to six degrees above normal throughout southern Ontario, one to three degrees above normal in the northeastern districts of Ontario, while in Patricia, Rainy River, and Kenora districts there were deficiencies of one to three degrees.

At the Lakehead Airport, 3.86 inches of precipitation was recorded in a heavy thunderstorm on the 10th, setting a new record for the calendar day. On the 14th and 15th hurricane Carla tracked up over the Great Lakes and through north central Ontario leaving heavy rainfall in its wake. Falls of two to three inches were reported from Earlton, Sudbury and Gore Bay and some other stations in this area. These heavy falls swelled the September total rainfalls to upwards of seven inches at a number of those stations which is over twice normal. The highest rainfall totals reported in Ontario for the month were 8.3 inches at Abitibi Canyon and 8.2 inches at Cochrane. In southern Ontario precipitation was light, with deficiencies ranging to sixty per cent, but averaging half this value.

September 1961 was the mildest on record in the southern sections of Quebec. A temperature of 92 was recorded at the Seignory Club, equalling the highest recorded in Canada during the month. New record high mean temperatures for September were established at a number of places, including the airports at Montreal and Quebec. Throughout the southern districts of the province mean temperatures were five to seven degrees above normal. In the central and northern interior of the province there were positive anomalies of one to three degrees.

In the Eastern Townships and the lower part of the Ottawa River valley, September was dry, deficiencies ranging from forty to eighty per cent. On the 15th and 16th of the month the remains of hurricane Carla moved through the upper Ottawa River valley bringing falls of two or three inches to this part of the province. As a result some very high totals were reported, notably 9.2 inches at Belleterre and 8.9 inches at Lake Dozois, the latter a new record for the month while at Belleterre 9.6 inches of precipitation was reported in September 1957. Most stations in the upper Ottawa River valley received about twice the normal fall for the month. In the central and northern interior the distribution was irregular ranging from deficiencies of eighty per cent at Cape Hopes Advance to an excess of forty per cent at Knob Lake.

September weather was warm throughout the Maritime Provinces. This was partly due to the lengthy period during which hurricane Esther remained stalled south of the Maritimes feeding a steady stream of humid tropical air into the district. Many maritime centres reported the highest September mean temperature on record, among which one of the more notable was Halifax with 93 years of record, while Moncton exceeded a 22 year record. For the month as a whole mean temperatures averaged four to six degrees above normal throughout the Maritime Provinces

September weather was dry in the province of Nova Scotia and the southern part of New Brunswick and Prince Edward Island. On the 15th of the month a small low of tropical origin moved rapidly northward into western New Brunswick producing strong winds over a small area, accompanied by heavy falls of rain. As a result, September precipitation totals in this section of New Brunswick averaged six to eight inches, the highest being Aroostook which reported a total of 8.22 inches for the month. In this part of New Brunswick, precipitation was about twice the normal but elsewhere in New Brunswick there were precipitation deficiencies ranging to sixty per cent while in Prince Edward Island and Nova Scotia, precipitation was generally forty to sixty per cent below normal.

On the Island of Newfoundland, September weather was dry and sunny with mean temperatures averaging two or three degrees above normal throughout the island. Both Gander and St. John's reported thirty hours more than normal sunshine. Precipitation was generally light but most stations reported heavier rains on the last few days of the month. On the 26th the City of Corner Brook received over two inches of rain in twenty-four hours. Along the west coast of the Island, there were temperature excesses of twenty to fifty per cent but elsewhere there were deficiencies of forty to sixty per cent.

September was warmer than usual along the Labrador coast, mean temperatures ranging generally one or two degrees above normal. Precipitation was forty-three per cent above normal at Goose Bay and there were small excesses at Cartwright and Belle Isle. The remaining stations along the Labrador coast reported precipitation deficiencies of ten to twenty per cent.

In the Yukon Territory September mean temperatures were one to three degrees below normal along the southern edge while in the central interior they were normal or slightly above. There were small precipitation deficiencies at Watson Lake and Mayo while other stations in the territory experienced deficiencies which ranged to forty per cent.

September mean temperatures were well below normal throughout the Northwest Territories except for a few stations along the lower part of the Mackenzie River where they were very close to normal. The greatest negative anomaly was twelve degrees at Eureka. This was the largest temperature deficiency reported anywhere in Canada during the month. Aside from these exceptions mean temperatures were generally four to seven degrees below normal throughout the Northwest Territories.

The distribution of precipitation was very irregular over The Northwest Territories during September. In the District of Mackenzie there were both excesses and deficiencies ranging to fifty per cent. In the District of Keewatin precipitation was heavy ranging to three times the normal fall. On the islands of the Arctic Archipelago there was no pattern, precipitation excesses and deficiencies being well scattered.

SEPTEMBER 1961

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month, including the rainfall and the equivalent of the snowfall.
SUN The total bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches, lying on the ground at the end of the month, (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
